GRAFFITI PROTECTION - PRODUCTS

Graffiti Protection H-MA -K

Graffiti Protection H-MA-K offers intensive protection against pollution. It prevents paint from finding its way into the porous natural stone and preserves the natural colour of the stone. H-MA-K contracts the capillary without closing them and is UV resistant. The product consists of environmentally friendly substances which are completely secreted. The emulsifiers are bio-degradable. The treated stone will not change in colour or appearance.

Graffiti Protection H -MA K 500

Graffiti Protection is water based prevents graffiti paint from adhering and penetrating the stone sandblasted and limestone without changing the colour of the stone. The product is UV resistant on marble stone and granite. consists of environmentally friendly substances.

Graffiti Protection P-MA Semi Permanent

Graffiti Protection Semi Permanent P-MA offers intensive protection against pollution. It prevents paint from finding its way into the porous natural stone and preserves the natural colour of the stone. H-Ma-K contracts the capillary without closing them and is UV resistant. Graffiti MA-G consists of environmentally friendly polymers which are completely secreted. The treated stone receives slight colour intensity. Certificate of the Fraunhofer Institute.

Graffiti Protection Semi Permanent VA 8008

Graffiti Protection VA-8008 offers intensive protection against pollution and prevents paint from finding its way into the stone; it is limited acid resistant and preserves the natural colour of the stone. It contracts the capillary without closing them and it is UV resistant. Graffiti Protection VA 8008 consists of environmentally friendly polymers which are completely secreted. Causes slight colour intensity on various stones.

IMPREGNATION

Impregnation
H-MA

The impregnation is water based for sandblasted and matt natural stone, sandstone or limestone. Water and pollution resistant.

Impregnation
H-PL

Impregnation based on solvents for polished stone, marble or granite, for tiles, concrete, limestone but also for grinded stone. Water and pollution resistant.

Impregnation
H-D

Impregnation based on solvents to intensify the colour of all coloured stones. The original colour of the natural stone will be intensified. It is especially visible on dark or black stone. Prevents the penetration of moisture and pollution.

Impregnation
VA 8000

Product VA 8000 is mainly used on used and worn-out older natural stones because of its resistance. Conditionally acid resistant. The product achieves a homogenous protecting polished effect which also protects the floor against slippery. Impregnation is based on polymers.

ANTI SLIP PROTECTION

Mega – Stop

An anti slip product for polished granite and tiles. Mega Stop causes a microscopic structure change on the surface which works also on wet areas. Slip protection can be maintained durably with the respective care product. Janitorial cleaning with KORO Basic RG.

Impregnation
MA

Product MA is mainly used on worn-out older natural stones because of its resistance. The product achieves a homogenous protecting polished effect which also protects the floors against slippery. Impregnation is based on polymers.
